2(ee) Recommendation
For use in the State of Washington

Insecticide/Miticide/Fungicide for Control of psyllid honeydew and sooty mold
This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product inconsistent with its labeling.
Do not apply this product in any way that will contact workers or other persons; either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe; consult the agency responsible for pesticide regulation. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

PRODUCT INFORMATION
M-Pede insecticide/miticide and fungicide is a contact insecticide, miticide and fungicide for control of soft-bodied insects, mites and powdery mildew. The formulation is based on potassium salts of naturally derived fatty acids. This product may be used to control targeted pests on crops which include vegetables, grapes and other small fruits, tree fruits, tree nuts, cotton, tobacco, shrubs, shade and ornamental trees, turf, foliage and flowering plants growing outdoors, in greenhouses and in interiorscapes. This product can be applied up to harvest.

| Psyllid honeydew, sooty mold       | Apply 0.25% v/v per 400 gallons at the rate of 400-800 gallons of water per acre. | NOTE: Enough spray solution MUST be applied to the tree to COMPLETELY remove the insect honeydew from the fruit and leaves.  
To avoid possible fruit marking, it is recommended the M-Pede application be followed by a water rinse of equal amount of volume within 12 hours of the M-Pede application.  
Minimum retreatment interval = 7-10 days during growing season.  
Do not exceed three applications per season for the fruit wash uses.  
Do not apply within 7 days of an oil, calcium or sulfur application.  
Cease spray activities at temperatures of 85 degrees.  
Avoid applications when trees are under environmental stress.  
Unless otherwise noted, do not tank mix this product with adjuvants such as penetrators, spreader stickers or activators, gibberellic acid, calcium nitrate, or diatomaceous earth, foliar nutrients, alkaline based chelating agents (such as EDTA), Aliette fungicide, chlorothalonil and pesticides containing sulfur or metallic ions (such as manganese, magnesium, iron, zinc, etc.) as they may be physically incompatible and/or phytotoxic.  
A defoaming agent may be needed for use in sprayers equipped with an agitator.  
The pH of the spray solution should be a neutral (7.0) pH or higher.  
Rates are provided as a % volume/volume (v/v) solution. A 0.25% solution is prepared by adding 1 gallon of M-Pede to 400 gallons of spray water. |
